1. PRODUCT IDENTIFICATION

1.1 Supplier product information

Product name	Agar-agar		
Production	17191809		
Product code	Content	EAN	Packaging
X1553	60g	8718309830526	Plastic jar and screw lock cap with warranty seal. Jar =  Cap = 
X1554	90g	8718309830533	
X1555	400g	8718309830540	

1.2 Scientific product information

Single ingredient		
Main use	Gelling agent	
Chemical name	Agar, Gelidium extract	
Production method	Agar is obtained from red seaweeds of the Gelidium species, collected from the Atlantic coast of Spain. Agar is extracted using hot, dilute alkali. The solution is cooled to form a very firm brittle gel, which is frozen to disrupt the gel structure. When the gel is thawed, impurities dissolved in the water can be expelled using high pressure, the gel is dried and ground to produce powdered agar.	

1.3 Legislative product information

CAS number	9002-18-0		
EU food additive	E406		
Country of Origin	Spain		

2. PRODUCT INFORMATION

2.1 Physical and Chemical properties

	Unit	Specification	Method
Appearance		flakes/powder	
Colour		grayish/beige Opaque and colorless when dissolved	
Odour/taste		neutral	
Melting point	°C	85 - 95	
Setting point	°C	30 - 40	
Gel Strength (Bloom)	g/cm ²	650	
Solubility		boiling water

3.2 Suitability for other diets:

Coeliacs	✓	Lactose intolerant	✓
Halal	✓	Vegans	✓
Kosher	✓	Vegetarian	✓

3.3 GMO Declaration:

Agar-agar does not contain genetically modified organisms and is not produced using raw materials of a genetically modified origin. At no stage during production does the product come into contact with genetically modified organisms.

4. STORAGE CONDITIONS

Storage conditions	In closed original packaging. Must be kept cool and dry in a well-ventilated place.
Shelf life	5 years after production, under the above mentioned conditions.

5. FOOD SAFETY

5.1 Hygiene:

This product is produced in a facility with an on HACCP based food safety system.

5.2 Identifications of dangers:

Classification of the substance (Regulation (EC) No 1272/2008)	Not classified. (non-hazardous)
--	---------------------------------

6. EXTENDED PRODUCT INFORMATION

6.1 Usage

Agar-agar powder from Natuurlijk Natuurlijk is made from atlantic seaweed. This vegetable gelatin is used as a thickener, gelling and binding ingredient. It has a gelling strength of 650 Bloom. Its gelling power is expressed in Bloom. The Bloom value is an important criterion for the quality of gelatin. It is generally between 30 and 300 for animal gelatin. It indicates the jelly strength or firmness of edible gelatin.

Agar gels are completely reversible and may be melted and reset without any loss of gel strength. The gels have a characteristic firm brittle texture. This gel structure is not affected by salts or proteins. The difference between melting and setting points, is much greater with agar than with other gelling agents. Agar gels are used in the baking industry for their durability at high temperatures.

It is important to note that dissolution of agar in boiling acid solutions (like fruit juice) causes significant degradation. Gel stability is best achieved at pHs slightly over 7,0. The addition of 10mg baking soda to slightly acidic agar improves gel strength.

Agar solutions are hazy. When agar gels are frozen (at around 0°C), they collapse upon thawing and do not recover their gel phase. Nevertheless, the gel can be remelted and regelled, producing a new gel with nearly identical properties to the original one.

Dosage: 5 to 10 grams per liter, presoaking agar (>5 minutes) improves dissolving

- Agar is defined as a strongly gelling hydrocolloid from marine algae.
- Agar is unique for commercial purpose because it forms firm gels at concentrations as low as 1%.
- Once the agar solution starts to boil, it should be boiled (without foaming) for exactly 20 seconds.
- If foaming occurs, disperse it by swirling and stirring for a few minutes.
- A good level of agar for use in icings will range from 0,2 to 0,5%
- At concentrations of 0,1 to 1,0%, agar is a useful antistaling agent in breads and cakes.
- Tannic acid (found, e.g., in squash, apple, and prune) may inhibit agar gelation. This can be avoided by adding small quantities of glycerol.
