6. EXTENDED PRODUCT INFORMATION

6.1 Usage

Baking powder classic is a baking powder which you can use in the same quantities as regular baking powder. When a recipe calls for baking powder, this is the one you would use, in exact the same amount.

Baking powder can best be sifted with the flour. The heavier the dough / batter and the thicker / higher the product, the more baking powder needs to be used. This can amount to 2 times the standard amount, such as with cake and muffins. With thin biscuits, half the standard amount is sufficient.

Dosage as a leavening agent in baked goods: 6 teaspoons baking powder classic (18g / 3,6%) on 500g of flour.

Chemical reaction when dissolved:

The corn starch in this baking powder is used to extend the shelf life of the baking powder by keeping the baking soda dry and separated from the tartaric acid. The starch also gives the baking powder the right volume for standard baking powder measuring. In the leavening process it only has a function as a retarder. It has no function in the actual gas production.

Baking soda + tartaric acid = carbon dioxide + water + sodium tartrate
